Learning how to use ZCASH and CHIPS as USD lawful USA currency and how to convert these to USD bank deposit funds is essential to benefitting through www.employeegold.info

The COMMERCIAL EXCHANGE KIOSK in www.chips-corner.com provides a list of possible ways to exchange ZCASH and CHIPS for USD bank deposit funds.

But, in this document, only one way will be addressed in detail.

The way chosen to be presented herein is available to anyone that is not afraid to work and believes in the free enterprise system.

It does require focusing on major purchases or business; for example, new construction.

New construction is historically very important for providing jobs and growing an economy.

So, the requirement is simple: Find entities that want to have new construction and have the financial means to do so; but, would rather not spend their money and would prefer, instead, to arrange to obtain profits equal to the value of the new construction!

Such an entity can deposit the funds they would otherwise spend on new construction into a bank of their choice and obtain a certificate of deposit (“CD”) properly registered so that it can be used as a financial basis within the world brokerage system.

Arrange for an entity that obtains a CD to contract to have professional traders contracted by INTERNATIONAL ENERGY CORPORATION use the certificate of deposit to engage in non-depletion electronic trading to produce profits.

50% of the profits would be disbursed, as contracted, to the entity that provides the CD, which could be used to pay for new construction.

The remaining 50% of profits would be transferred to an account for THE ENERGY STORE (see in www.chips-corner.com).

Trading would also be done using THE ENERGY STORE account.

From profits obtained through THE ENERGY STORE, 40% would be allocated to pay for the new construction for the party that provided the CD, until it is fully paid for using the above mentioned 50% and this 40%.

After the construction is fully paid for, the CD could be returned or could be used in future contracts, at the discretion of the entity that provided the CD and of INTERNATIONAL ENERGY CORPORATION.
In addition to income related to sponsoring, as indicated in THE ENERGY STORE which can provide significant income for finding the entities that want to have new construction without spending their money, 25% of profits from trading using funds placed through the process with THE ENERGY STORE would be allocated to exchange ZCASH and CHIPS to USD bank deposit funds for the party that sponsored the entity that wants the new construction.

However, whereas the 40% disbursement would cease after the new construction is paid for, the 25% allocation for ZCASH and CHIPS would continue for as long as professional trading on THE ENERGY STORE account continues.

This can provide a never-ending source of USD bank deposit funds for the party that made the effort to find the entities that want to have new construction without spending their money.

But, how long would it take to generate the USD bank deposit funds necessary to pay for the new construction?

Well, let’s look at a $100 Million USD example; which may be comprised of several entities that acquire and make CD available for professional trading.

For ease of understanding and of computation, let’s forget about trading using THE ENERGY STORE account, and focus only on the use of the CD for trading.

If profit per trade that would be allocated towards the new construction turned out to only be 0.01%, to generate $100 Million USD using $100 Million USD as a basis, without considering accumulation of funds from profits to be used in the trading process, it would take 10,000 trades to reach the goal.

If 20 trades per day, 5 days per week, were executed, it would take 100 weeks, or less than two years.

This is only for illustration, as the actual profit per trade may be far more than 0.01%, but the number of trades may be far less than 100 per week.

In short, timing is totally market dependent.

But, based on the existence of the CD and of demonstrable cash flow from trading, interim financing may be obtained from a lender, which could be contracted to be repaid from the CD trading cash flow.

Or, BANK SUPPORT as found in www.employeegold.info may be used, in which case the funds borrowed would not have to be repaid as the guarantee provided by the bank FIDES (www.fides.com.mx) would provide payment; and the proceeds from CD trading could be pocketed as profit!

*In conclusion, by following this plan an entity that wants new construction could obtain it without out-of-pocket expenditures and could pocket equal value as profit for doing so!*
And, the party wanting to exchange ZCASH and CHIPS to USD bank deposit funds could have a USD bank deposit fund build up to do so as may be needed.

With that in place, and showing others how it can be done, other businesses may find it to be highly profitable to accept ZCASH and CHIPS as payment, without worrying about exchanging for USD bank deposit funds other than as they may need to do so; since using ZCASH as currency provides the benefit that it duplicates its value when used!

The protocols discussed above may similarly be applied to pay for any major purchase or business transaction; and, thereby, create personalized funding sources for the exchange of ZCASH and CHIPS to USD bank deposit funds.
